

**TACO ATV**

**Know the Basic Rules of  
Safety Before Hitting the  
Trails with an Atv**

- All-terrain vehicles (ATVs) have grown increasingly popular for recreational activity and have become a valuable asset at work. ATVs have so many unique features that enable people to operate in a variety of harsh environments. It can go to such places where no other vehicles can go or be used. It also makes them very much valuable for the workplace. Whether it is used as an essential piece of farm equipment or used for recreation on trails, ATVs require serious attention to safety.
- ATVs are designed for single riders, and the long seat in them is intended to help the rider shift their body weight while moving up and downhills. It is not meant for carrying multiple passengers. You probably can't do that when you have an extra rider because it changes the center of gravity. Adding excess weight can cause challenges that drivers need to be aware of to avoid an accident. ATV operators for below sixteen years and above 65 years of age are not safe without proper gear. Riders of such category can experience various physical and sensory limitations, which may exacerbate ATVs' inherent dangers.

## RHINO 250

- Following additional safety, strategies help you reduce the injuries. Understanding the risk and taking the necessary precautions can reduce the likelihood of injury. Following a list of few golden rules to follow will help you ride the ATV safely. It will help you in reducing the accidents and injuries that may result from improper ATV riding operations.

- Always wear a crash helmet, goggles, long sleeves, long pants, over-the-ankle boots, and gloves.
- Select the Personal Protective Equipment that plays a crucial role in your head's safety to your toes. The best PPE you choose, the safer will be your riding!
- Try to ride less on paved roads except to cross because another vehicle could hit you. ATVs are designed to be operated off-road.
- Never ride the ATV if you take alcohol or drugs.
- Never carry a double passenger or extra load on a single-rider ATV, as most ATVs are designed for one rider at a time. While going downshift to the back, shift to the front when going up at an inclined road or turning (shift left or right accordingly).
- Riding an ATV is suitable for your age and size is wise. However, ATVs are designed for children to travel at slower speeds. However, the physical ability of the child needs to be considered while handling an ATV.
- Manage to guide the riders that are younger than sixteen. Always remind younger riders that ATVs are not toys!
- Ride only on known trails and also at a safe speed.
- Become safety savvy by taking a hands-on ATV riders course online.
